

Migrate, Modernize & Orchestrate Identity

Extend Azure AD across hybrid and multi-cloud environments with Identity Orchestration from Strata

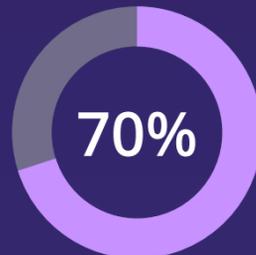

Adoption of multi-cloud networks is the “new normal”

80% of enterprises have a hybrid cloud strategy.¹

The hybrid cloud market is estimated to reach \$97 billion by 2023, up from \$44.6 billion in 2018.²

70% of enterprises named “migrating more workloads to the cloud” as a top priority in 2021.¹

Manual migrations for distributed identity systems are slow and costly

As companies move to hybrid and multi-cloud environments, manual identity integrations become more complex.

Slow and manual migrations

Manually migrating apps and users from legacy identity systems to modern IdPs like Azure AD can be so tedious that companies will choose to keep their current systems past their End-of-Service dates.

Costly app modernization

Modernizing legacy apps is no small feat. It often requires developing and maintaining custom software to integrate with a new cloud IdP or modern authentication solution.

Security gaps during integration

Deploying new identity services like passwordless authentication requires permanent code changes for every application protected by the new access workflow. This risks exposure to security threats and slows deployment.

Automate complex identity integrations across your cloud and on-premises environment

Quickly and easily connect on-premises apps to Azure AD with Identity Orchestration from Strata.

Enable seamless integrations

Minimize manual effort by automating the migration process. Swiftly lift and shift on-premises apps and user identities to Azure AD for full protection.

Eliminate app rewrites

Abstract identity from your company's hundreds (or even thousands) of apps and migrate them at scale to Azure AD in a matter of hours.

Reduce security risks

Enable phased deployment of new identity services across apps, reducing security risks by allowing the concurrent support of multiple target IdPs and authentication solutions.

Improve security, cut costs, and save time with Strata’s Identity Orchestration solution

Connect legacy and cloud identity 100x faster

Orchestrate identities across any and all legacy systems you’re currently running on. Strata also works with all cloud native identity infrastructures, including Azure AD.³

Lower integration costs by up to 95%

Easily orchestrate with pre-built integration catalog and solution-oriented identity recipes. Strata’s abstraction layer makes it easy to roll out or change identity systems at scale.³

Deliver identity projects 10x faster

Eliminate the resources related to managing the complexity of custom coding. With Strata, there’s no need to refactor apps or gain buy-in from individual app owners as you modernize your identity systems with Azure AD.³

Don’t let identity silos slow you down. Get started with Strata today.
